Proposal Panel 1 : 2502380

[Back to Proposal](#)

Agency Name: National Science Foundation

Agency Tracking Number: 2502380

Panel Summary

Proposal summary: The proposal focuses broadly on understanding tropicalization of Shimura varieties, with four subprojects on understanding their i) abstract theory via toroidal compactification, ii) combinatorial aspects, iii) cohomology via tropical moduli spaces, and iv) cohomology via homological algebra. The broader impacts include an REU and mentorship program aimed toward LGBTQ+ students.

Intellectual Merit:

Strengths:

- The PI has an established track record in proving results in this area using these techniques.
- The problems are interesting and merit consideration.

Weaknesses:

- The scope of the proposal was not as broad as in some competing proposals.
- The projects seemed to be generalizations of past work and did not necessarily show a trajectory for significant growth in the research agenda.

Broader Impacts:

Strengths:

- The scope of the Broader Impacts was uniformly considered impressive.
- The PI has a proven history of working to support LGBTQ+ and women members of the mathematical community, including organizing conferences.
- The effort to support LGBTQ+ mathematicians is an extremely important goal and the PI's proposed activities fill an under-served need.

Weaknesses:

- More detail on concrete plans for these projects would strengthen the proposal, since conferences and especially REUs require a significant amount of administrative work.

Prior NSF Support: The panel was very impressed with the PI's work in broader impacts as well as the previous work completed.

Ultimately, the panel was very impressed with the broader impacts, but felt that the intellectual merit of the proposal could have been stronger.

The panel placed the proposal in the Low Priority category.

The summary was read by/to the panel and the panel concurred that the summary accurately reflects the panel discussion.

PANEL RECOMMENDATION: Low Priority
